Document Revision History

Table 1: Document Revision History

Revision	Date	Description
Ubuntu 18.04	April 30, 2018	Initial version of this document.

1 Firmware Burning

1. Check the device's PCI address.

```
lspci | grep Mellanox
```

Example:

```
00:06.0 Infiniband controller: Mellanox Technologies MT27520 Family  
[ConnectX-3 Pro]
```

2. Identify the adapter card's PSID.

```
# mstflint -d 81:00.0 q  
Image type:          FS2  
FW Version:          2.36.5000  
FW Release Date:    26.4.2016  
Rom Info:            type=PXE version=3.4.718 devid=4103  
Device ID:           4103  
Description:         Node          Port1          Port2  
Sys image  
GUIDs:               e41d2d0300b3f590 e41d2d0300b3f591 e41d2d0300b3f592  
e41d2d0300b3f593  
MACs:                e41d2db3f591      e41d2db3f592  
VSD:  
PSID:                MT_1090111019
```

3. Download the firmware BIN file from the Mellanox website that matches your card's PSID:

www.mellanox.com → [Support/Education](#) → [Support Downloader](#)

4. Burn the firmware.

```
# mstflint -d <lspci-device-id> -i <image-file> b
```

5. Reboot your machine after the firmware burning is completed.

6. Validate new firmware burned successfully:

```
# ethtool -i ens3  
driver: mlx4_en  
version: 2.2-1 (Feb 2014)  
firmware-version: 2.40.5000  
expansion-rom-version:  
bus-info: 0000:0a:00.0  
supports-statistics: yes  
supports-test: yes  
supports-eprom-access: no  
supports-register-dump: no  
supports-priv-flags: yes
```

2 Port Type Management

ConnectX®-3/ConnectX®-3 Pro/ConnectX®-4 ports can be individually configured to work as InfiniBand or Ethernet ports. By default both ConnectX®-4 VPI ports are initialized as InfiniBand ports. If you wish to change the port type use the `mstconfig` after the driver is loaded.

1. Install `mstflint` tools.

```
yum install mstflint
```

2. Check the device's PCI address.

```
lspci | grep Mellanox
```

Example:

```
00:06.0 Infiniband controller: Mellanox Technologies MT27520 Family
[ConnectX-3 Pro]
```

3. Use `mstconfig` to change the link type as desired IB – for InfiniBand, ETH – for Ethernet.

```
mstconfig -d <device pci> s LINK_TYPE_P1/2=<ETH|IB|VPI>
```

Example:

```
# mstconfig -d 00:06.0 s LINK_TYPE_P1=ETH

Device #1:
-----

Device type:    ConnectX3Pro
PCI device:    00:06.0

Configurations:
LINK_TYPE_P1           Current          New
                       IB (1)           ETH (2)

Apply new Configuration? ? (y/n) [n] : y
Applying... Done!
-I- Please reboot machine to load new configurations.
```

4. Reboot your machine.
5. Query the device's parameters to validate the new configuration.

```
# mstconfig -d 00:06.0 q

Device #1:
-----

Device type:    ConnectX3Pro
PCI device:    0a:00.0

Configurations:
SRIOV_EN           Current
True (1)
NUM_OF_VFS         8
LINK_TYPE_P1       ETH (2)
LINK_TYPE_P2       IB (1)
LOG_BAR_SIZE       3
BOOT_PKEY_P1       0
BOOT_PKEY_P2       0
BOOT_OPTION_ROM_EN_P1 True (1)
BOOT_VLAN_EN_P1    False (0)
BOOT_RETRY_CNT_P1  0
LEGACY_BOOT_PROTOCOL_P1 PXE (1)
BOOT_VLAN_P1       1
BOOT_OPTION_ROM_EN_P2 True (1)
```

```
BOOT_VLAN_EN_P2           False (0)
BOOT_RETRY_CNT_P2         0
LEGACY_BOOT_PROTOCOL_P2   PXE (1)
BOOT_VLAN_P2              1
IP_VER_P1                 IPv4 (0)
IP_VER_P2                 IPv4 (0)
```

3 Modules Loading and Unloading

Mellanox modules for ConnectX®-2/ConnectX®-3/ConnectX®-3 Pro are:

- mlx4_en, mlx4_core, mlx4_ib

Mellanox modules for ConnectX®-4/ConnectX®-4 Lx are:

- mlx5_core, mlx5_ib

In order to unload the driver, you need to first unload `mlx*_en/` `mlx*_ib` and then the `mlx*_core` module.

➤ *To load and unload the modules, use the commands below:*

- Loading the driver: `modprobe <module name>`

```
# modprobe mlx5_ib
```

- Unloading the driver: `modprobe -r <module name>`

```
# modprobe -r mlx5_ib
```

4 Important Packages and Their Installation

rdma-core

rdma-core RDMA core userspace libraries and daemons

libibmad: Low layer InfiniBand diagnostic and management programs

libibmad OpenFabrics Alliance InfiniBand MAD library

opensm: InfiniBand Subnet Manager

opensm-libs Libraries used by OpenSM and included utilities

opensm OpenIB InfiniBand Subnet Manager and management utilities

Ibutils: OpenIB Mellanox InfiniBand Diagnostic Tools

ibutils-libs Shared libraries used by ibutils binaries

ibutils OpenIB Mellanox InfiniBand Diagnostic Tools

infiniband-diags: OpenFabrics Alliance InfiniBand Diagnostic Tools

infiniband-diags OpenFabrics Alliance InfiniBand Diagnostic Tools

perftest: IB Performance tests

perftest IB Performance Tests

mstflint: Mellanox Firmware Burning and Diagnostics Tools

mstflint Mellanox firmware burning tool

➤ *To install the packages above run:*

```
# apt-get install <packages names>
```

5 SR-IOV Configuration

5.1 Setting up SR-IOV

1. Install the mstflint tools.

```
# yum install mstflint
```

2. Check the device's PCI.

```
# lspci | grep Mellanox
```

Example:

```
00:06.0 Infiniband controller: Mellanox Technologies MT27520 Family
[ConnectX-3 Pro]
```

3. Check if SR-IOV is enabled in the firmware.

```
mstconfig -d <device pci> q
```

Example:

```
# mstconfig -d 00:06.0 q

Device #1:
-----

Device type:      ConnectX3Pro
PCI device:      00:06.0

Configurations:                                     Current
SRIOV_EN          True(1)
NUM_OF_VFS        8
LINK_TYPE_P1     ETH(2)
LINK_TYPE_P2     IB(1)
LOG_BAR_SIZE     3
BOOT_PKEY_P1     0
BOOT_PKEY_P2     0
BOOT_OPTION_ROM_EN_P1 True(1)
BOOT_VLAN_EN_P1  False(0)
BOOT_RETRY_CNT_P1 0
LEGACY_BOOT_PROTOCOL_P1 PXE(1)
BOOT_VLAN_P1     1
BOOT_OPTION_ROM_EN_P2 True(1)
BOOT_VLAN_EN_P2  False(0)
BOOT_RETRY_CNT_P2 0
LEGACY_BOOT_PROTOCOL_P2 PXE(1)
BOOT_VLAN_P2     1
IP_VER_P1        IPv4(0)
IP_VER_P2        IPv4(0)
```

4. Enable SR-IOV:

```
mstconfig -d <device pci> s SRIOV_EN=<False|True>
```

5. Configure the needed number of VFs

```
mstconfig -d <device pci> s NUM_OF_VFS=<NUM>
```

NOTE: This file will be generated only if IOMMU is set in the grub.conf file (by adding "intel_iommu=on" to /boot/grub/grub.conf file).

6. [mlx4 devices only] Create/Edit the file /etc/modprobe.d/mlx4.conf:

```
options mlx4_core num_vfs=[needed num of VFs] port_type_array=[1/2 for IB/ETH],[ 1/2 for IB/ETH]
```

Example:

```
options mlx4_core num_vfs=8 port_type_array=1,1
```

7. **[mlx5 devices only]** Write to the sysfs file the number of needed VFs.

```
echo [num_vfs]re > /sys/class/infiniband/mlx5_0/device/sriov_numvfs
```

Example:

```
# echo 8 > /sys/class/infiniband/mlx5_0/device/sriov_numvfs
```

8. Reboot the driver.
9. Load the driver and verify that the VFs were created.

```
# lspci | grep mellanox
```

Example:

```
00:06.0 Network controller: Mellanox Technologies MT27520 Family [ConnectX-3 Pro]
00:06.1 Network controller: Mellanox Technologies MT27500/MT27520 Family [ConnectX-3/ConnectX-3 Pro Virtual Function]
00:06.2 Network controller: Mellanox Technologies MT27500/MT27520 Family [ConnectX-3/ConnectX-3 Pro Virtual Function]
00:06.3 Network controller: Mellanox Technologies MT27500/MT27520 Family [ConnectX-3/ConnectX-3 Pro Virtual Function]
00:06.4 Network controller: Mellanox Technologies MT27500/MT27520 Family [ConnectX-3/ConnectX-3 Pro Virtual Function]
00:06.5 Network controller: Mellanox Technologies MT27500/MT27520 Family [ConnectX-3/ConnectX-3 Pro Virtual Function]
00:06.6 Network controller: Mellanox Technologies MT27500/MT27520 Family [ConnectX-3/ConnectX-3 Pro Virtual Function]
00:06.7 Network controller: Mellanox Technologies MT27500/MT27520 Family [ConnectX-3/ConnectX-3 Pro Virtual Function]
00:06.0 Network controller: Mellanox Technologies MT27500/MT27520 Family [ConnectX-3/ConnectX-3 Pro Virtual Function]
```

For further information, refer to section [Setting Up SR-IOV MLNX_OFED User Manual](#).

6 Default RoCE Mode Setting

1. Mount the configs file.

```
# mount -t configfs none /sys/kernel/config
```

2. Create a directory for the mlx4/mlx5 device.

```
# mkdir -p /sys/kernel/config/rdma_cm/mlx4_0/
```

3. Validate what is the used RoCE mode in the default_roce_mode configs file.

```
# cat /sys/kernel/config/rdma_cm/mlx4_0/ports/1/default_roce_mode  
IB/RoCE v1
```

4. Change the default RoCE mode,

- For RoCE v1: IB/RoCE v1
- For RoCE v2: RoCE v2

```
# echo "RoCE v2" >  
/sys/kernel/config/rdma_cm/mlx4_0/ports/1/default_roce_mode  
# cat /sys/kernel/config/rdma_cm/mlx4_0/ports/1/default_roce_mode  
RoCE v2
```

```
# echo "IB/RoCE v1" >  
/sys/kernel/config/rdma_cm/mlx4_0/ports/1/default_roce_mode  
# cat /sys/kernel/config/rdma_cm/mlx4_0/ports/1/default_roce_mode  
IB/RoCE v1
```
