Highest Levels of Scalability
Simplified Network Manageability
Maximum System Productivity

40/56/100/200Gb/s InfiniBand Switch System Family
MELLANOX SMART INFINIBAND SWITCH SYSTEMS – THE HIGHEST PERFORMING INTERCONNECT SOLUTION FOR WEB 2.0, BIG DATA, CLOUD COMPUTING, ENTERPRISE DATA CENTERS (EDC) AND HIGH-PERFORMANCE COMPUTING (HPC).

VALUE PROPOSITIONS

- Mellanox switches come with port configurations from 36 to 800 at speeds up to 200Gb/s per port with the ability to build clusters that can scale out to tens-of-thousands of nodes.
- Mellanox switches deliver high bandwidth with sub 90ns* latency to get the highest server efficiency and application productivity.
- Best price/performance solution with error-free 40-200 Gb/s link speed.
- World’s smartest switches, enabling in-network computing through Co-Design Scalable Hierarchical Aggregation and Reduction Protocol (SHARP)™ technology.
- Scalability and subnet isolation using InfiniBand routing and InfiniBand to Ethernet gateway capabilities.
- Real-Time Scalable Network Telemetry with built-in hardware sensors for rich traffic data collection.

* Performance may vary between different switch products and configurations. For detailed performance information please contact your Mellanox representative.
Mellanox’s family of **InfiniBand switches** delivers the highest performance and port density with a complete chassis and fabric management solution to enable compute clusters and converged data centers to operate at any scale while reducing operational costs and infrastructure complexity.

**BENEFITS**

- Industry-leading energy efficiency, density, and cost savings
- Ultra low latency
- Granular QoS for Cluster, LAN and SAN traffic
- Quick and easy setup and management
- Maximizes performance by removing fabric congestions
- Fabric management for cluster and converged I/O applications

The Mellanox family of switches includes a broad portfolio of edge and modular switches that range from 36 to 800 ports, and support 40-200Gb/s per port with the lowest latency. Mellanox InfiniBand Software Defined Networking (SDN) switches ensure separation between control and data planes. InfiniBand centralized management and programmability of the network by external applications enables cost effective, simple and flat interconnect infrastructure.

**Virtual Protocol Interconnect® (VPI)**

Virtual Protocol Interconnect (VPI) flexibility enables any standard networking, clustering, storage, and management protocol to seamlessly operate over any converged network leveraging a consolidated software stack. VPI simplifies I/O system design and makes it easier for IT managers to deploy infrastructure that meets the challenges of a dynamic data center.

**Scalable Hierarchical Aggregation and Reduction Protocol (SHARP)™**

The world’s smartest network switches are designed to enable in-network computing through the Co-Design SHARP technology. The Co-Design architecture enables the usage of all active data center devices to accelerate the communications frameworks, resulting in order of magnitude applications performance improvements and CPU utilization optimization.
Sustained Network Performance
The Mellanox switch family enables efficient computing for clusters of all sizes from the very small to the extremely large while offering near-linear scaling in performance. Advanced features such as static routing, adaptive routing, and congestion management allows the switch fabric to dynamically detect and avoid congestion and to re-route around points of congestion. These features ensure the maximum effective fabric performance under all types of traffic conditions.

Reduce Complexity
Mellanox switches reduce complexity by providing seamless connectivity between InfiniBand and Ethernet based networks. You no longer need separate network technologies with multiple network adapters to operate your data center fabric. Granular QoS and guaranteed bandwidth allocation can be applied per traffic type. This ensures that each type of traffic has the resources needed to sustain the highest application performance.

Reduce Environmental Costs
Improved application efficiency along with the need for fewer network adapters allows you to accomplish the same amount of work with fewer, more cost-effective servers. Improved cooling mechanism and reduced power and heat consumption allow data centers to reduce the cost associated with physical space.

EDGE SWITCHES
36 or 40-port non-blocking 40 to 200Gb/s InfiniBand Switch Systems
The Mellanox family of switch systems provide the highest-performing fabric solutions in a 1U form factor by delivering up to 16Tb/s of non-blocking bandwidth with the lowest port-to-port latency. These edge switches are an ideal choice for top-of-rack leaf connectivity or for building small to medium sized clusters. The edge switches, offered as externally managed or as managed switches, are designed to build the most efficient switch fabrics through the use of advanced InfiniBand switching technologies such as Adaptive Routing, Congestion Control and Quality of Service.

MODULAR SWITCHES
216 to 800-port full bi-directional bandwidth 40 to 200Gb/s InfiniBand Switch Systems
Mellanox modular switches provide the highest density switching solution, scaling from 43Tb/s up to 320Tb/s of bandwidth in a single enclosure, with low-latency and the highest per port speeds of up to 200Gb/s. Its smart design provides unprecedented levels of performance and makes it easy to build clusters that can scale out to thousands-of-nodes.

The InfiniBand modular switches deliver director-class availability required for mission-critical application environments. The leaf, spine blades and management modules, as well as the power supplies and fan units, are all hot-swappable to help eliminate down time.
**Enhanced Management Capabilities**

Mellanox managed InfiniBand switches come with an onboard subnet manager, enabling simple out-of-the-box fabric bring up for up to 2K nodes. MLNX-OS® (SB7000 and QM8000 families) chassis management provides administrative tools to manage the firmware, power supplies, fans, ports, and other interfaces.

All Mellanox switches can also be coupled with UFM®, Mellanox’s unified fabric manager software, for managing scale-out InfiniBand computing environments. UFM enables data center operators to efficiently provision, monitor and operate the modern data center fabric. UFM boosts application performance and ensures that the fabric is up and running at all times. MLNX-OS provides a license activated embedded diagnostic tool, Fabric Inspector, to check node-to-node, node-to-switch connectivity and ensure the fabric health.

**HARDWARE**
- 40-200Gb/s per port
- Full bisectional bandwidth to all ports
- IBTA 1.21 and 1.3 compliant
- QSFP connectors supporting passive and active cables
- Redundant auto-sensing 110/220VAC power supplies
- Per port status LED Link, Activity
- System LEDs: System, fans, power supplies
- Unit ID LED
- Hot-swappable replaceable fan trays

**MANAGEMENT**
- Mellanox Operating System (MLNX-OS)
  - Switch chassis management
  - Embedded Subnet Manager
  - Error, event and status notifications
  - Quality of Service based on traffic type and service levels
- Coupled with Mellanox Unified Fabric Manager (UFM)
  - Comprehensive fabric management
  - Secure, remote configuration and management
  - Performance/provisioning manager
- Fabric Inspector
  - Cluster diagnostics tools for single node, peer-to-peer and network verification

**SAFETY**
- CB
- cTUVus
- CE
- CU

**EMC (EMISSIONS)**
- CE
- FCC
- VCCI
- ICES
- RCM

**OPERATING CONDITIONS**
- Operating 0°C to 40°C, Non-Operating -40°C to 70°C
- Humidity: Operating 10% to 85%
- Altitude: Operating up to 3200m

**ACOUSTIC**
- ISO 7779
- ETS 300 753

**OTHERS**
- RoHS-6 compliant
- 1-year warranty
For detailed information on features, compliance, and compatibility, please see each product's specific product brief.

**WARRANTY INFORMATION**

Mellanox switches come with a one-year limited hardware return-and-repair warranty, with a 14 business day turnaround after the unit is received. For more information, please visit the Mellanox Technical Support User Guide.

**ADDITIONAL INFORMATION**

Support services including next business day and 4-hour technician dispatch are available. For more information, please visit the Mellanox Technical Support User Guide. Mellanox offers installation, configuration, troubleshooting and monitoring services, available on-site or remotely delivered. For more information, please visit the Mellanox Global Services web site.
