

Mellanox Technologies Named to the Red Herring 100

Leading InfiniBand Silicon Supplier Recognized by Red Herring Editors for Innovation and Business Strategy

SANTA CLARA, CALIFORNIA and YOKNEAM, ISREAL - April 16, 2001 - Mellanox Technologies, a leading InfiniBand semiconductor company for the server, communications, and data storage markets that comprise the Internet Data Center, announced today its inclusion in the Red Herring 100, the top 100 public and private companies selected by the editors of Red Herring, the leading magazine of business technology and innovation.

The Red Herring 100 recognizes companies whose services, business models and products define business innovation. It represents leaders of tomorrow in more than a dozen sectors, including software, biotechnology, wireless, communications services, and business and financial services.

"Being selected for inclusion in the Red Herring 100 is an outstanding achievement for Mellanox and is an accomplishment for which we are very honored," said Eyal Waldman, CEO of Mellanox. "Since inception, Mellanox has been driven to develop innovative products that will help lead the InfiniBand revolution. We are very pleased that the Red Herring has recognized Mellanox, out of an impressive field of InfiniBand companies, for technological leadership, quality product and strong business model."

In its fifth year, the Red Herring 100 has become the most sought-after list of its kind. The editors of Red Herring compile the list from subjective and metrical data favored by venture capitalists

and investment bankers--insights that predict a company's ability to overturn existing markets or create entirely new ones.

The list, featured in the May 2001 issue and on Red Herring's website www.redherring.com, includes highly relevant information including the company's strategy, execution, products and services, brand, finances and competition. Joining the world's most influential thought leaders in finance, technology and business innovation, the Red Herring 100 will be recognized at Venture 2001, Red Herring's annual invitation-only summit to be held April 29 through May 1, 2001 at the Resort at Squaw Creek, Lake Tahoe, CA. For more information regarding Venture 2001, please visit www.redherring.com/events

Eyal Waldman, CEO of Mellanox Technologies, will be one of the guest speakers on the Semiconductor Panel, scheduled to take place on May 1 at the Venture 2001 event in Lake Tahoe.

Mellanox is the first InfiniBand semiconductor supplier to deliver commercially available silicon to support both 2.5Gb/s (1X) and 10Gb/s (4X) links compatible with the InfiniBand 1.0 specification. The company has also demonstrated initial interoperability with both silicon and software providers in the InfiniBand market.

The InfiniBand architecture is an industry-standard interconnect technology that provides new levels of performance and reliability for the next generation of servers and I/O devices. Mellanox is a member company of the InfiniBand Trade Association, a nonprofit organization dedicated to developing and promoting the InfiniBand architecture. More information about the InfiniBand Trade Association and specification can be found at InfiniBandTA.org

About Mellanox Technologies

Mellanox is a leading InfiniBand semiconductor supplier providing switches, Host Channel Adapters (HCA's), and Target Channel Adapters (TCAs) to the server, communications, and data storage markets. The company has raised more than \$33 million to date and has strong corporate and venture backing from Intel Capital, Raza Venture Management, Sequoia Capital, and US Venture Partners. Mellanox currently has more than 150 employees in multiple sites worldwide. The company's business operations, sales, marketing, and customer support are headquartered in Santa

Clara, CA; with the design, engineering, software, system validation, and quality and reliability operations based in Israel. For more information on Mellanox, visit www.mellanox.com
